## 2. ABSOLUTE MAXIMUM RATINGS

### 2.1 ABSOLUTE RATINGS OF ENVIRONMENT

Item	Symbol	Value		Unit	Note
		Min.	Max.		
Storage Temperature	T <sub>ST</sub>	-20	+60	°C	[Note 1,3]
Operating Ambient Temperature	T <sub>OP</sub>	0	50	°C	[Note 1,2,3]

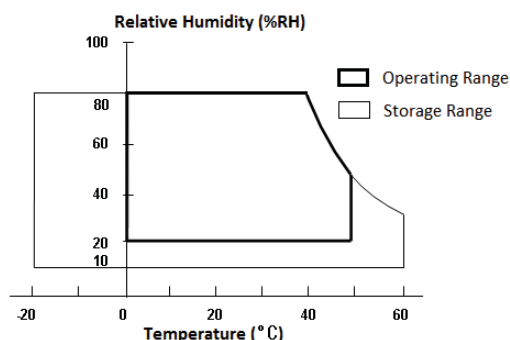

Storage Condition: With shipping package.

Shelf life: one year

[Note 1] Temperature and relative humidity range is shown in the figure below.

\*1) 80 %RH Max. (Ta ≤ 40 °C).

\*2) Wet-bulb temperature should be 40 °C Max. (Ta >40 °C).

\*3) No condensation.

[Note 2] The maximum operating temperature is based on the test condition that the surface temperature of display area is less than or equal to 50°C with LCD module alone in a temperature controlled chamber. Thermal management should be considered in your product design to prevent the surface temperature of display area from being over 60°C. The range of operating temperature may degrade in case of improper thermal management in your product design.

[Note 3] The rating of environment is base on LCD module. Leave LCD cell alone, this environment condition can't be guaranteed. Except LCD cell, the customer has to consider the ability of other parts of LCD module and LCD module process.

※ About the relation between data input and back light lighting, please base on the above-mentioned input sequence.

※ When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

※ VCC-dip conditions:

(1) When  $3.6V \leq VCC(\min) < 4.5V$ ,  $t_d \leq 10$  ms

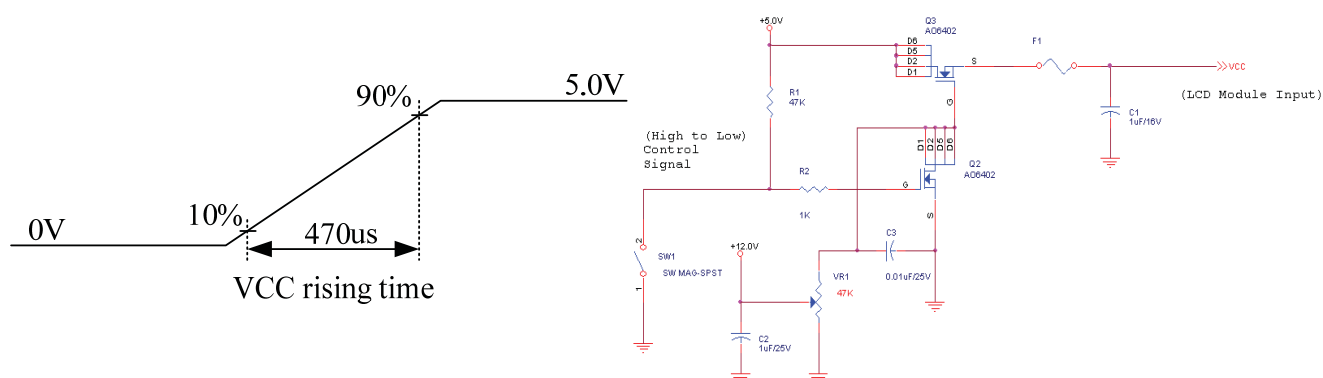

(2) When  $VCC < 3.6V$ , VCC-dip conditions should also follow the VCC-turn-on conditions.

[Note2]

IRush Measurement Condition:

The duration of rising time of power input is 470us.

\*The measurement shall be executed 30 minutes after lighting at rating.

\* The optical characteristics are measured using the following equipment.

Measurement of viewing angle range, Response time.

Measurement of Contrast, Luminance, Chromaticity.

[Note 1] Definitions of viewing angle range:

[Note 2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio} = \frac{\text{Luminance (Brightness) with white screen}}{\text{Luminance (Brightness) with black screen}}$$

[Note 3] Definition of response time

The output signals of photo detector are measured when the input signals are changed from "Full White" to "Full Black" (rising time, TR), and from "Full Black" to "Full Black" (falling time, TF), respectively. The response time is interval between the 10% and 90% (1 frame at 60 Hz) of amplitudes.

$$\text{Response time} = Tr + Tf$$

[Note 4] This shall be measured at center of the screen.

[Note 5] Definition of Luminance and Luminance uniformity:

Luminance: To measure at the center position “5” on the screen (NO.5).

Luminance uniformity: Lw (MAX) and Lw(MIN) are the maximum and minimum luminance value measure at the position “1~9” on the screen (NO.1~9) and the equation:

$$\Delta Lw = Lw(MIN) / Lw(MAX) \times 100\%$$

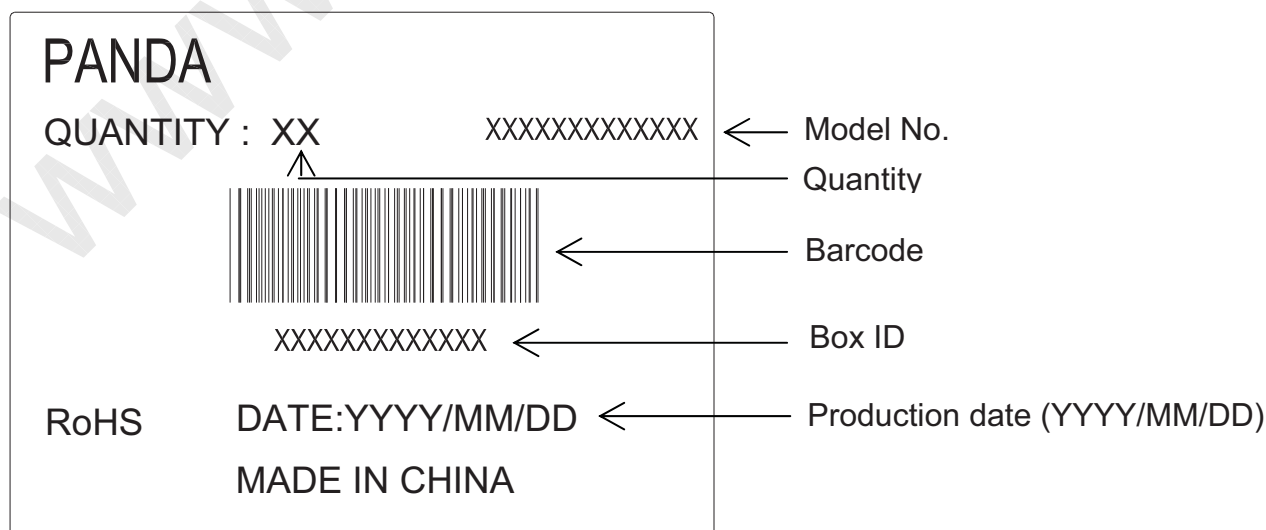

## 7. DEFINITION OF LABELS

## 8. PACKING

### 8.1 PACKING SPECIFICATIONS

(a) Piling number of carton	: 32
(b) Packing quantity in one carton	: 8 pcs
(c) Carton size	: 609×257×405 mm
(d) Pallet size	: 1223×1050×101 mm

### 8.2 PACKING METHOD

## 9. PRECAUTIONS

### 9.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (a) Do not apply rough force such as bending or twisting to the module during assembly.
- (b) It is recommended to assemble or to install a module into the user's system in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (c) Since the LCM consists of TFT and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, person who is handling an LCM should be grounded through adequate methods such as an anti-static wrist band. Connector pins should not be touched directly with bare hands.

Reference: Process control standard is shown as follow,

	item	Management standard value and performance standard
1	Anti-static mat(shelf)	1to50 [Mega ohm]
2	Anti-static mat(floor, desk)	1to100 [Mega ohm]
3	Ionizer	Attenuate from $\pm 1000V$ to $\pm 100V$ within two seconds.
4	Anti-static wrist band	0.8 to 10 [Mega ohm]
5	Anti-static wrist band entry and ground resistance	Below 1000 [ohm]
6	Temperature	22 to 26 [ $^{\circ}C$ ]
7	Humidity	60 to 70 [%]

- (d) Do not apply pressure or impulse to the module to prevent the damage of LCD panel and backlight.
- (e) Always follow the correct power-on sequence when the LCD module is turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- (f) Be sure to turn off the power supply when inserting or disconnecting the cable.
- (g) Do not disassemble the module.
- (h) Front polarizer can easily be damaged, so please pay attention on it.
- (i) Using a absorbent cotton or other soft cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (j) Since long contact with drops of water may cause discoloration or spots, please wipe off them as soon as possible.
- (k) The Panel will be broken or chipped when it is dropped or bumped against a hard substance.
- (l) Applying too much force and stress to PWBs and drivers may cause a malfunction electrically and mechanically.
- (m) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- (n) Moisture can easily penetrate into LCD module and may cause the damage during operation.
- (o) High temperature or humidity may deteriorate the performance of LCD module. Please store LCD modules in the specified storage conditions.
- (p) This LCM is corresponded to ROHS.
